

## Operational Description

The device is a AC750 wireless Travel router which operates at 2.4 GHz and 5 GHz band and supports IEEE 802.11a/b/g/n/ac transmission modes. The device supports 2TX MIMO function to provide high speed transmission rate and WPS function to connect with other devices more easily.

RF main chip	MT7620AH / MT7610E
Frequency range (MHz)	2412~2462 / 5180 ~ 5240 / 5745~5825
Modulation type	DBPSK, DQPSK, CCK BPSK, QPSK, 16QAM, 64QAM, 256QAM
Oscillating frequency (MHz)	25 / 40
Antenna type	PIFA 2dBi gain @ 2.4GHz 3dBi gain @ 5GHz
TX MIMO	2TX MIMO

Data transmission is always initiated by software, which is then pass down through the MAC , through the digital and analog baseband, and finally to the RF chip. Several special packets (ACKs, CTS , PSPoll, etc) are initiated by the MAC. There are the only ways the digital baseband portion will turn on the RF transmitter, which it the turns off at the end of the packet. Therefore, the transmitter will be on only while one of the aforementioned packets are being transmitted.
