## Product Overview

**TEW-753DAP**

### Package Contents

**TEW-753DAP** package includes:

- TEW-753DAP
- Multi-Language Quick Installation Guide
- CD-ROM (User's Guide)
- Network cable (1.5 m/5 ft.)
- Power adapter (12 V, 1.25 A)

If any package contents are missing or damaged, please contact the retail store, online retailer, or reseller/distributor from which the product was purchased.

### Features

TRENDnet's N600 Dual Band PoE Access Point, model TEW-753DAP, is a feature rich business class access point with proven concurrent 300 Mbps dual band wireless technology. A variety of installation scenarios are supported with Access Point, WDS AP, WDS Bridge, and Repeater modes. Save installation time and costs with PoE.

#### **Quick Setup**

Get up and running in minutes with the intuitive guided setup

#### **Low Profile**

Off white low profile smoke detector shape blends into most environments

#### **Power over Ethernet (PoE)**

Save installation time and costs with a PoE (Optional power port for non-PoE installations)

#### **LED Control**

Disable diagnostic LEDs to further reduce visual attention

#### **Concurrent Dual Band**

Proven concurrent 300 Mbps dual band wireless n

#### **Gigabit Port**

Gigabit port maintains high performance connection to network

#### **Wireless Coverage**

Increased coverage with MIMO technology

#### **Backward Compatible**

Compatible older wireless g devices

**Operation Modes**

Independently set each band to Access Point, WDS AP, WDS Bridge, or Repeater mode

**IPv6**

IPv6 support

**AP Scan**

Integrated wireless scan function helps optimize wireless setup

**SSIDs**

Up to 8 SSIDs per band (16 total) with isolation support

**Traffic Shaping**

Allocate bandwidth to each wireless SSID

**System Logs**

Eight system logs aid network troubleshooting

**Spanning Tree**

Configurable spanning tree controls

**SNMP**

Extend network monitoring to this device with SNMP support

**Encrypted Wireless**

Support for encryption up to WPA2

**VLAN Management**

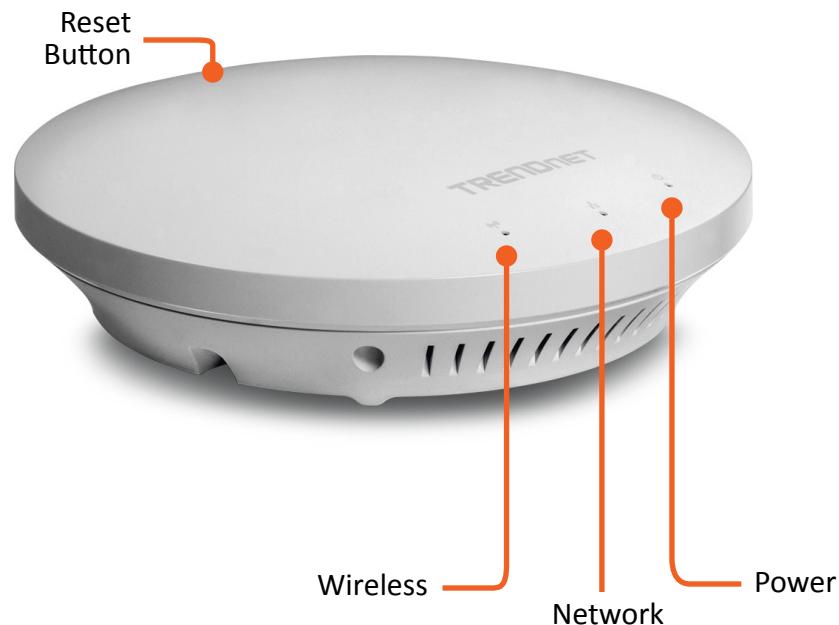

Up to eight SSIDs per band with VLAN management support

**Network Access**

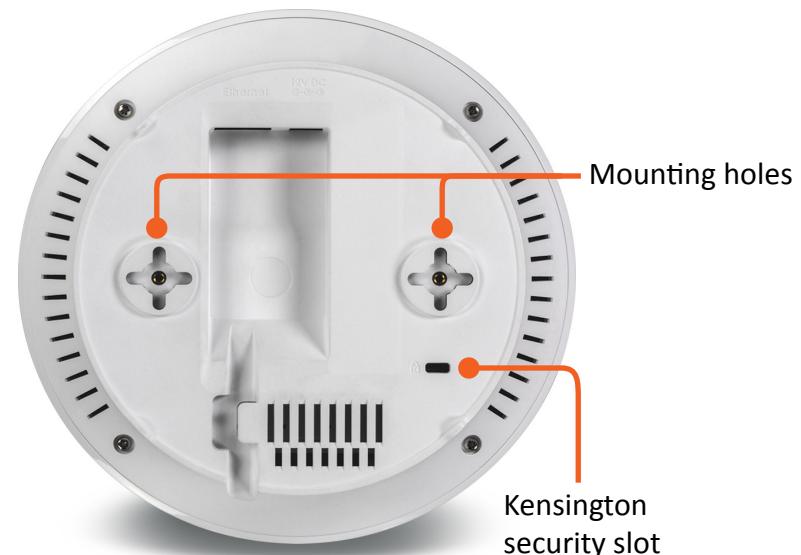

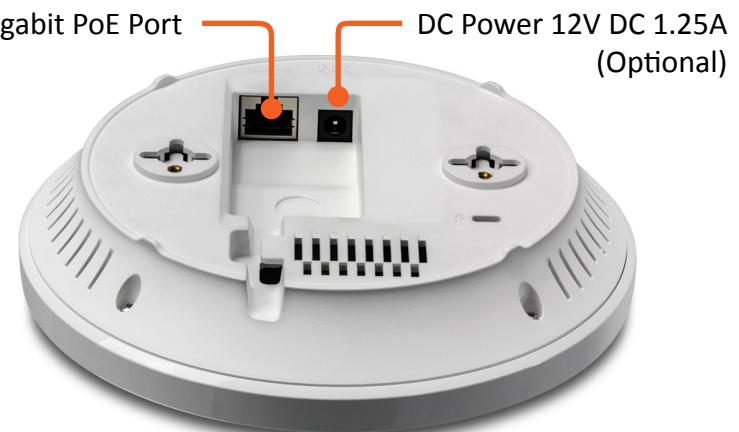

Create MAC filter tables to reduce network access risk

- Concurrent dual band 300 Mbps\* wireless N
- Create up to 8 SSIDs per band
- No need to install the device near a power source with PoE installation
- Manage traffic shaping per SSID
- Off-white low profile housing blends into environment
- IPv6 support
- Off-white housing blends into environment
- 3-year limited warranty

\*Maximum wireless signal rates are referenced from IEEE 802.11 theoretical specifications. Actual data throughput and coverage will vary depending on interference, network traffic, building materials and other conditions.

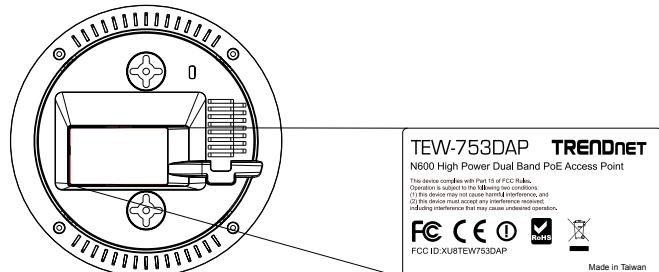

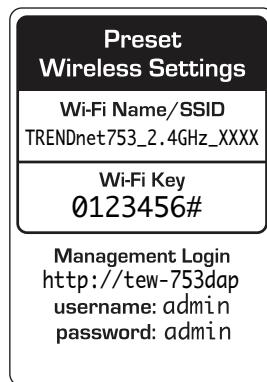

**Front Panel**

<b>Reset Button</b>	<ul style="list-style-type: none"> <li>Push and hold for 2 seconds to reset TEW-753DAP</li> <li>Push and hold for more than 10 seconds to reset configuration to factory default</li> </ul>	
<b>Power LED</b>	OFF	Powered off or LED display has been disabled
	ON	Powered on
<b>Network LED</b> Orange: 10/100 Green: Giga bit	OFF	No network connected through Ethernet port (PoE) or LED display has been disabled
	ON	Network connected through Ethernet port (PoE)
	Flashing	Network activities are detected on Ethernet (PoE) port
<b>Wireless LED</b> Orange: 2.4GHz Green: 5GHz	OFF	No wireless network connection or LED display has been disabled
	Flashing	Wireless network activities are detected

**Mounting Holes****Connectors**

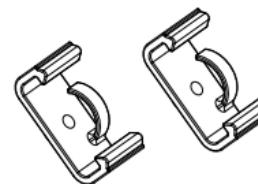

## Product Preset Information

There are two preset product labels comes with the package. The first label is located on plastic wrapping of TEW-753DAP. The second label is located on the bottom of the TEW-753DAP. You can find default SSID, wireless key, administrator account, and administrator password there. The default static management IP is 192.168.10.100.

## Mounting Accessories

The mounting accessories are provided for easier hardware installation, including two sets of T-Bar clippers, two sets of screws, and a set of spacers.

15/16" T-Bar Clips

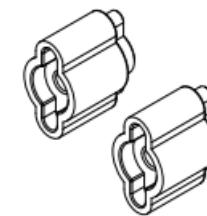

9/16" T-Bar Clips

P2.6 \* 10 Screws

P2.6 \* 25 Screws

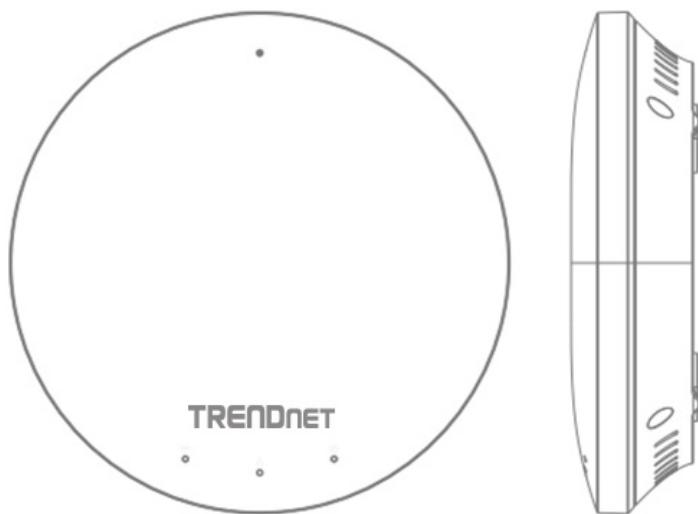

Spacers

## Hardware Installation

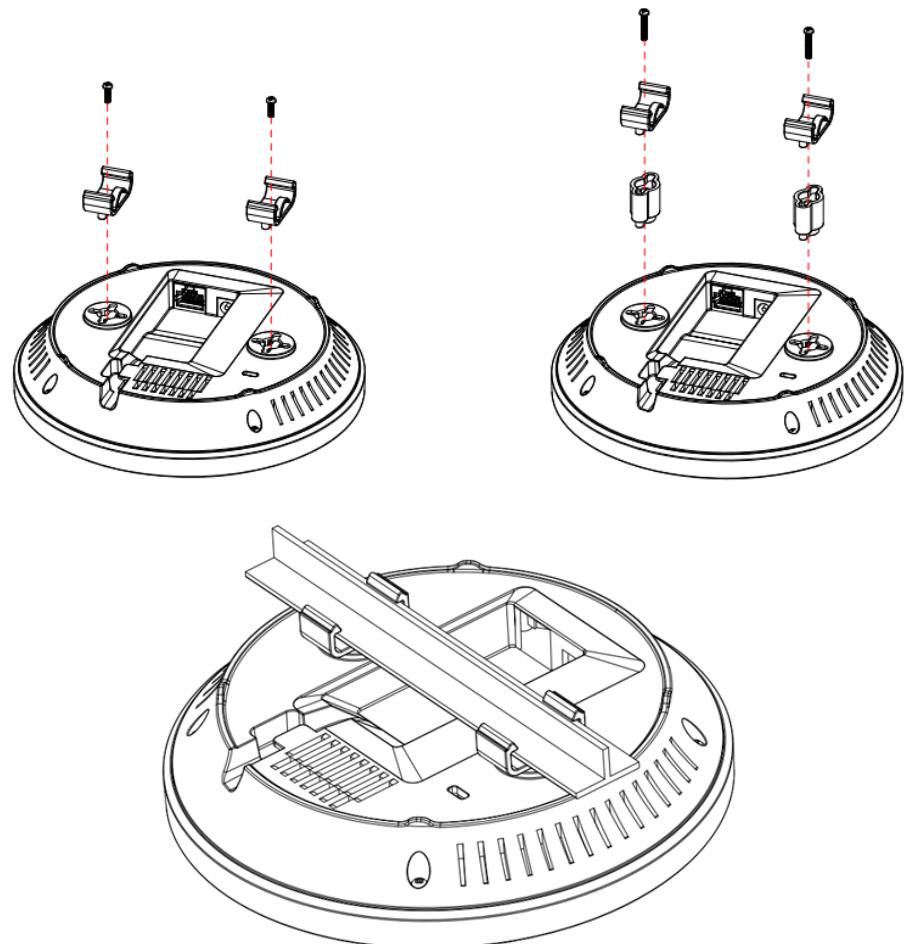

### Mount on Wall or Ceiling

Use two P3.5 pan head screws to hold the TEW-753DAP. The distance between mounting points is 2 3/4" (7cm)

### Mount on T-Bar

Two additional bronze screw holes are provided for T-Bar mounting. Use two P2.6 screws to secure the TEW-753DAP on T-Bar clip and then clip on the T-Bar.

## Wireless Performance Considerations

There are a number of factors that can impact the range of wireless devices. Adjust your wireless devices so that the signal is traveling in a straight path, rather than at an angle. The more material the signal has to pass through the more signal you will lose. Keep the number of obstructions to a minimum. Each obstruction can reduce the range of a wireless device. Position the wireless devices in a manner that will minimize the amount of obstructions between them.

Building materials can have a large impact on your wireless signal. In an indoor environment, try to position the wireless devices so that the signal passes through less dense material such as dry wall. Dense materials like metal, solid wood, glass or even furniture may block or degrade the signal.

Antenna orientation can also have a large impact on your wireless signal. Use the wireless adapter's site survey tool to determine the best antenna orientation for your wireless devices.

Interference from devices that produce RF (radio frequency) noise can also impact your signal. Position your wireless devices away from anything that generates RF noise, such as microwaves, radios and baby monitors.

Any device operating on the 2.4GHz frequency will cause interference. Devices such as 2.4GHz cordless phones or other wireless remotes operating on the 2.4GHz frequency can potentially drop the wireless signal. Although the phone may not be in use, the base can still transmit wireless signal. Move the phone's base station as far away as possible from your wireless devices.

Adjust the wireless power setting on your AP if you have more than one AP covering a large area. Covering only the neighbor hop APs in wireless range is a good design. Covering more than neighbor APs will experience wireless interference and slow down the communication.

## Operation Modes

There are four operating modes provided by TEW-753DAP, Access Point, Client Bridge, WDS and Repeater. Configure the TEW-753DAP to different operation mode which service the best in your network.

### Access Point

This is the default operation mode. TEW-753DAP service wireless end points in this mode. You can setup local or remote wireless authentication, setup up to 8 sets of SSIDs in 2.4GHz band and 5GHz band, total 16 SSIDs and separate SSID or STA traffic.

### Client Bridge

When Client Bridge mode is set to 2.4GHz or 5GHz interface of TEW753DAP, this interface functions as a wireless client connecting to any AP dynamically (channels and encryptions). The interface bridges the traffic to the Ethernet and the other wireless interface.

### Wireless Distribution System

In Wireless Distributin System, WDS, mode you can configure the selected interface to be WDS bridge, WDS Access Point, or WDS Station.

**WDS Bridge:** In this mode, the selected interface wirelessly communicate to other WDS bridges to make a wireless backbone. A WDS link is bidirectional; both end points must support WDS and each access point must know the MAC Address of the other. Each access point will be configured with the remote access point's MAC address and vice versa. Make sure all access points are configured with the same SSID, wireless channel and wireless encryption settings.

**WDS Access Point:** This is a hybrid mode. The selected interface can be a WDS bridge and an access point at the same time.

**WDS Station:** This is a hybrid mode. The selected interface can be a WDS bridge and a wireless station at the same time.

## **Repeater**

When Repeater Mode is selected, the selected wireless interface functions as a wireless repeater and is able to repeat the wireless signal of an access point. This feature is used to expand your existing wireless network on places your current access point is unable to reach. Make sure all the settings on selected interface of the TEW-753DAP matches the wireless access points you want to repeat in same wireless settings including SSID, channel and wireless encryption settings.

## Application Diagram

## System configuration

### System Management and Default Settings

If you have a brand new out of box TEW-753DAP or if you just reset TEW-753DAP to factory defaults by pressing and holding reset button for over 10 seconds, your TEW-753DAP has following settings:

Management IP : 192.168.10.100

Administrator name : admin

Administrator password : admin

Default SSID : (printed on pre-set label)

Default SSID passphrase : (printed on pre-set label)

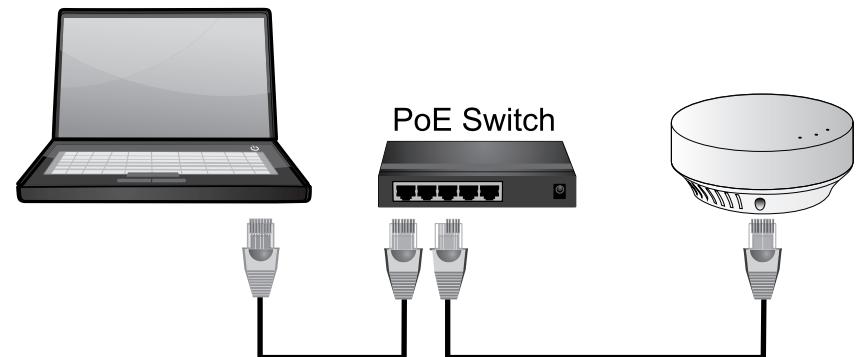

### Log-in System Management for the First Time

**1** Power on your TEW-753DAP by connecting PoE cable to a PoE switch or plug-in the power adapter comes with the package. The power LED will turned on.

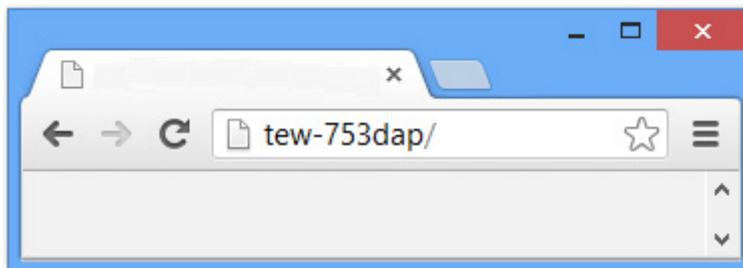

**2** Search for available wireless connections in your computer's network settings. The default SSID of the TEW-735AP is shown on the preset label. The default wireless security settings are set to WPA2 and the passphrase is printed on the preset label and device label.

Or,  
Connect a network cable from your computer to the TEW-753DAP network port.

- 3** Open a web browser and type **http://tew-753DAP** to access web administration page.

If you have a static IP set on your PC, please open a web browser and enter **http://192.168.10.100**. The TEW-735AP login page will appear.

Username:	<input type="text"/>
Password:	<input type="password"/>
Language:	English
<input type="button" value="Login"/>	

Enter administrator login information (The default user name is **admin** and password is **admin**)

\* Please reference the troubleshooting section if you cannot access administration web page.

- 4** Change your administration login password away from factory default setting. Click **Next** to continue.

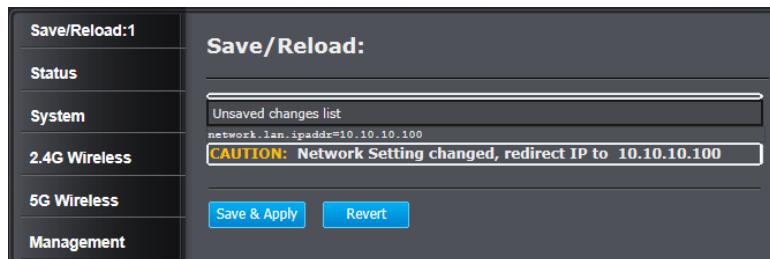

New Name	<input type="text" value="admin"/>
Old Password	<input type="password"/>
New Password	<input type="password"/>
Confirm Password	<input type="password"/>
<input type="button" value="Next"/>	

- 5** Change the management IP address for the TEW-753DAP if necessary. Click **Apply**.

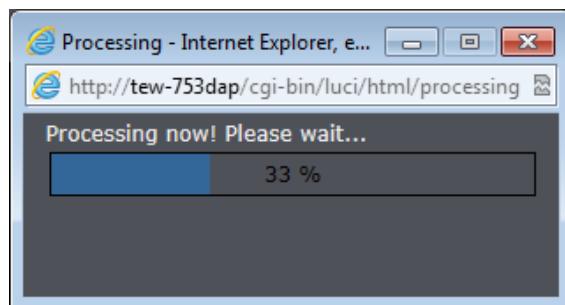

IP Network Setting	<input checked="" type="radio"/> Obtain an IP address automatically (DHCP) <input type="radio"/> Specify an IP address
IP Address	192.168.10.100
IP Subnet Mask	255.255.255.0
Default Gateway	0.0.0.0
Primary DNS	0.0.0.0
Secondary DNS	0.0.0.0
Use Link-Local Address	<input checked="" type="checkbox"/>
IPv6 IP Address	<input type="text"/>
IPv6 Subnet Prefix Length	<input type="text"/>
IPv6 Default Gateway	<input type="text"/>
IPv6 Primary DNS	<input type="text"/>
IPv6 Secondary DNS	<input type="text"/>
<input type="button" value="Apply"/>	

© Copyright 2013 TRENDnet. All Rights Reserved.

- 6 Click **Save/ Reload** on top of the menu and then click **Save & Apply**.

- 7 TEW-753DAP will apply password change and then reboot. Login again with your new password.

\* Make sure you are still connecting to TEW-753DAP after reboot if you wireless connects to TEW-753DAP.

## Setup Wizard

Setup wizard is provided as part of the web configuration utility. It sets up the basic administrator password and management IP address by clicking on the **Wizard** button on the function menu. The following screen will appear.

- 1 Enter your new administrator password and then click **Next** to continue.

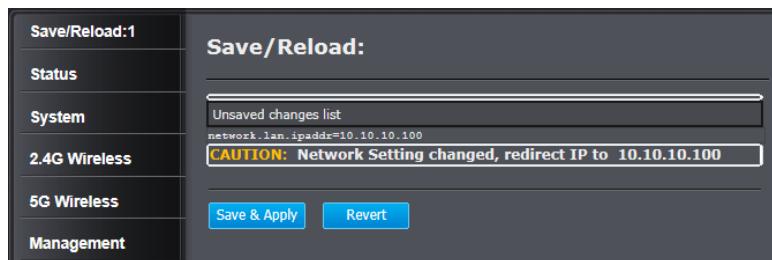

Save/Reload:0	Login Setting	
Status		
System	New Name	admin
Wizard	Old Password	
Operation Mode	New Password	
IP Settings	Confirm Password	
Spanning Tree Settings	<input type="button" value="Next"/>	

- 2 Enter the management IP address for this TEW-753DAP. The default IP address is 192.168.10.100. Set it up in your network management subnet with a unique IP address. You can leave it set on default IP if you have only one TEW-753DAP on network. Click **Apply**.

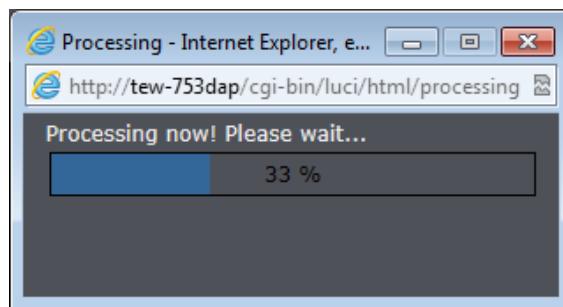

IP Settings	
System Information	
IP Network Setting	<input checked="" type="radio"/> Obtain an IP address automatically (DHCP) <input type="radio"/> Specify an IP address
IP Address	192 . 168 . 10 . 100

- 3 Click **Save/ Reload** on top of the menu and then click **Save & Apply**.

- 4 TEW-753DAP will apply password change and then reboot. Login again with your new password.

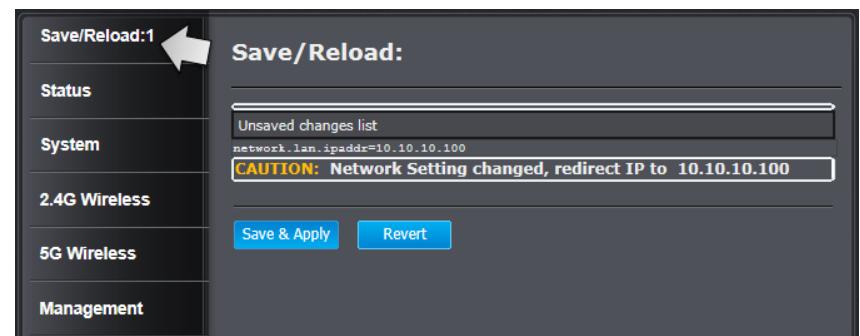

\* Make sure you are still connecting to TEW-753DAP after reboot if you wireless connects to TEW-753DAP.

### Save/ Reload

The TEW-753DAP is a commercial grade wireless access point. To make multiple network settings change at the same time and minimum the interruption of production network, all network configurations have to be changed in two stages.

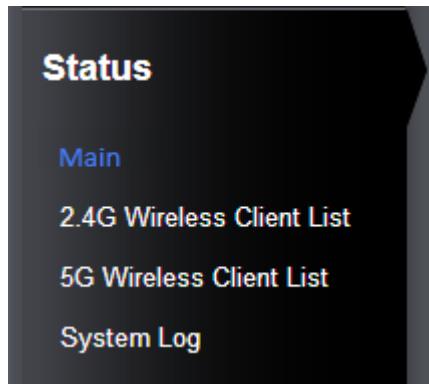

When you change a network setting, the change command will be saved in a queue. When you finish all the setting changes, click **Save/ Reload** on top of the menu. Review the list of command on your change list. Click **Save & Apply** to commit the change. If you want to trash the changes, click **Revert**.

The number following **Save/ Reload** is a reminder showing how many changes in the queue waiting to be commit.

## Status

**Main status** page shows TEW-753DAP basic information. Click Status then main to show the page.

System Information	
<b>Device Name :</b>	Name of this device recognized by other network device such as SNMP.
<b>Ethernet MAC Address :</b>	The MAC address of Ethernet Interface
<b>2.4G Wireless MAC Address :</b>	The MAC address of each individual active SSID.
<b>5G Wireless MAC Address :</b>	The MAC address of each individual active SSID.
<b>Country :</b>	The country you are currently located.
<b>Current Time :</b>	The current time. This time is important for schedule control and log accuracy.
<b>Firmware version :</b>	Currently run firmware version
<b>Management VLAN ID :</b>	The VLAN ID assigned to device management network. The default setting is no VLAN tagging on management network traffic.

### 2.4G Wireless Client List

This page shows all wireless clients connected to the 2.4GHz interface.

The screenshot shows a web-based management interface for a network device. On the left is a vertical sidebar with navigation links: Save/Reload:0, Status (Main, 2.4G Wireless Client List, 5G Wireless Client List, System Log), System, 2.4G Wireless, 5G Wireless, and Management. The main content area is titled "2.4GHz / Client List". It contains a table with the following data:

SSID:#	MAC Address	TX(Bytes)	RX(Bytes)	RSSI(dBm)	Kick and Ban
SSID1:#1	00:17:c4:00:17:c4	90Kb	358Kb	-38	<button>Kick and Ban</button>
SSID8:#1	00:23:6c:00:23:6c	904Kb	571Kb	-22	<button>Kick and Ban</button>

Below the table is a blue "Refresh" button.

<b>SSID : #</b>	Wireless client was associated with which SSID and what is its client number
<b>MAC Address :</b>	MAC address of wireless client
<b>TX (Bytes) :</b>	Transmitting data statistics
<b>RX (Bytes) :</b>	Receiving data statistics
<b>RSSI(dBm) :</b>	Received Signal Strength Indication: Signal strength of this wireless client
<b>Kick and Ban :</b>	Click this button to send this client to MAC address filter list. Click <b>OK</b> when you see this prompt.

✖

MAC filter deny mode will be enabled. This MAC 00:23:6c:90:23:66 will be added to the deny list.

**OK**    **Cancel**

**Refresh :** Click this button to refresh the list

**5G Wireless Client List**

This page shows all wireless clients connected to the 2.4GHz interface.

SSID: #	MAC Address	TX(Bytes)	RX(Bytes)	RSSI(dBm)	Kick and Ban
SSID1: #1	00:17:c4:00:17:c4	90Kb	358Kb	-38	<b>Kick and Ban</b>

## System

### **Operation Mode**

You can choose one of the mode to fit your network plan: Access Point, WDS AP, WDS Bridge and Universal Repeater.

#### **Access Point**

This is the default operation mode. Wireless clients, known as wireless stations (STAs), can wireless associate with TEW-753DAP and connect to Internet via Ethernet port.

#### **WDS AP**

In this operation mode. TEW-753DAP wireless connects to other WDS (Wireless Distribution System) for backbone

communication and provides wireless connection to clients (STAs) at the same time.

#### **WDS Bridge**

In this operation mode. TEW-753DAP connects *ONLY* to other WDS (Wireless Distribution System) as a backbone bridge.

#### **Universal Repeater**

TEW-753DAP repeats wireless signal and packets in this mode for backbone communication as well as client access. This feature is used to expand your existing wireless network on places your current access point is unable to reach. Make sure all the settings of the TEW-753DAP matches to your root or connecting wireless access points, same SSID, channel and wireless encryption settings.

#### **IP Settings**

The TEW-753DAP has a static IP 192.168.10.100 set in factory for management purpose. You can change this IP address to fit your network plan. You can also set TEW-753DAP to DHCP client accepting IP dynamically.

### IP Settings

(**Save & Reload** is required to take effect.)

**Cancel** : Click this button to abandon the change

### Band Steer

The TEW-753DAP equipped with 2.4GHz and 5GHz wireless interfaces. When your client device can work on both 2.4GHz and 5GHz wireless, Band Steer can redirect your 2.4GHz crowded traffic to 5GHz band automatically. To setup band steer, you have to setup the same SSID on both 2.4GHz and 5GHz. Then check enable band steering on this page. Click **Save**.

**Band Steer**

---

Band steering alleviates network congestion by directing traffic from the 2.4 GHz band to the 5GHz band.

**NOTE:**  
To enable band steering, you have to setup steering SSID the same in both 2.4GHz and 5GHz.

<b>Band Steering</b>	
<input checked="" type="checkbox"/> Enable	
<b>Save</b>	<b>Cancel</b>

## 2.4G Wireless

### Wireless Network

General setups for your 2.4GHz wireless connection. You can setup up to eight SSIDs for different groups of users.

2.4GHz / Wireless Network				
Wireless Mode	802.11 B/G/N Mixed			
Channel HT Mode	20/40MHz			
Extension Channel	Upper Channel			
Channel / Frequency	Ch1-2.412GHz Auto			
AP Detection	<input type="button" value="Scan"/>			
Current Profiles				
SSID	Security	VID	Enable	Edit
TRENDnet753_2.4GHz_5RL2	WPA2-PSK AES	1	<input checked="" type="checkbox"/>	<input type="button" value="Edit"/>
	None	2	<input type="checkbox"/>	<input type="button" value="Edit"/>
	None	3	<input type="checkbox"/>	<input type="button" value="Edit"/>
	None	4	<input type="checkbox"/>	<input type="button" value="Edit"/>
	None	5	<input type="checkbox"/>	<input type="button" value="Edit"/>
	None	6	<input type="checkbox"/>	<input type="button" value="Edit"/>
	None	7	<input type="checkbox"/>	<input type="button" value="Edit"/>
	None	8	<input type="checkbox"/>	<input type="button" value="Edit"/>
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>				

<b>Network Mode :</b>	Choose between N only, G only, B only, B/G mixed, or B/G/N mixed mode. The rule of the thumb is choose single mode if your devices all works in the same mode. Mixed mode increases compatibility, but sometimes lowers the data speed.
802.11 B/G/N Mixed	<input checked="" type="button"/>
802.11 B	<input type="button"/>
802.11 B/G Mixed	<input type="button"/>
802.11 G	<input type="button"/>
802.11 N only	<input type="button"/>
<b>Channel HT Mode :</b>	The latest 802.11 protocol can combine channel for better wireless performance. You can choose fixed 20MHz or 40MHz, or automatically select 20MHz or 40MHz channels.
20/40MHz	<input checked="" type="button"/>
40MHz	<input type="button"/>
20/40MHz	<input type="button"/>
20MHz	<input type="button"/>
<b>Extension Channel :</b>	When you choose manual channel selection and 20/40MHz or 40MHz in channel HT mode, you can choose which neighbor channel you want to combine, upper channel or lower channel.
Upper Channel	<input checked="" type="button"/>
Lower Channel	<input type="button"/>
Upper Channel	<input type="button"/>
<b>Channel / Frequency :</b>	If you want to setup fixed channel, choose a channel number to switch your radio frequency. Otherwise, check <b>auto</b> to select channel automatically which is set by default.  US: Channel 1 - 11 Euro: Channel 1 - 13
Ch1-2.412GHz	<input checked="" type="button"/>
Ch1-2.412GHz	<input type="button"/>
Ch2-2.417GHz	<input type="button"/>
Ch3-2.422GHz	<input type="button"/>
Ch4-2.427GHz	<input type="button"/>
Ch5-2.432GHz	<input type="button"/>
Ch6-2.437GHz	<input type="button"/>
Ch7-2.442GHz	<input type="button"/>
Ch8-2.447GHz	<input type="button"/>
Ch9-2.452GHz	<input type="button"/>
Ch10-2.457GHz	<input type="button"/>
Ch11-2.462GHz	<input type="button"/>
<b>Current Profile</b>	
<b>SSID (1 - 8) :</b>	The wireless network name setup for this SSID.

<b>Security :</b>	Wireless security was setup to this SSID.
<b>VID :</b>	VLAN id for this SSID
<b>Enable :</b>	Check this box to enable this SSID
<b>Edit :</b>	Click <b>Edit</b> to change the settings of this SSID

(Save & Reload is required to take effect.)

#### AP Detection

Before you setup your TEW-753DAP wireless settings, you may want to know what signal is current running in the air. Click Scan to make a site survey and list available access points around you.

**2.4GHz / Site Survey**

**2.4GHz Site Survey** i:Infrastructure f:Ad\_hoc

BSSID	SSID	Channel	Signal Level	Type	Security	Mode
00:14:D1:C5:7D:44	TrendnetSkyN	1	-77 dBm	11g/n	WPA2-PSK	<span style="color: green;">i</span>
00:14:D1:BE:07:74	WalkingDead	1	-70 dBm	11g/n	WPA2-PSK	<span style="color: green;">i</span>
00:14:D1:AA:1C:80	MII	1	-85 dBm	11g/n	WPA/WPA2-PSK	<span style="color: green;">i</span>

[Go Back](#)

<b>BSSID :</b>	Basic SSID. This is strictly unique SSID to identify a wireless access point, WAP. It is also the MAC address of the wireless interface.
<b>SSID :</b>	Service Set Identifier. This SSID is human readable and performs as ESSID to setup wireless groups.
<b>Channel :</b>	2.4GHz wireless channel number
<b>Signal Level :</b>	The signal strength from the access point.

<b>Type :</b>	The 802.11 wireless mode this access point provides.
<b>Security :</b>	Which wireless security was set to use.
<b>Mode:</b>	This wireless source works on infrastructure mode or ad hoc mode.

**Go Back :** Click this button to go back

#### SSID Settings

Click **Edit** one the SSID you want to edit. The following setup window will appear.

#### 2.4G/5G SSID Profile

- |                    |   |
|--------------------|---|
| SSID               | Specify the SSID for the current profile.   |
| Suppressed SSID    | Check this option to hide the SSID from clients. If checked, the SSID will not appear in the site survey. |
| Station Separation | Click the appropriate radio button to allow or prevent communication between client devices.              |
| Wireless Security  | See the Wireless Security section.  |
| Save / Cancel      | Click Save to accept the changes or Cancel to cancel  |

and return previous settings.

**ESSID Selection :** Select the SSID you want to set up wireless security

**Separate :** **SSID:** If you check this box, clients associated with this SSID cannot communicate with wireless clients associated with other SSID directly.

**STA:** If you check this box, wireless clients (a.k.a. STA) associated with this SSID cannot communicate to each other directly. Even they are in the same wireless group.

**Broadcast ESSID :** Select Enable or Disable from the drop-down list. This is the SSID broadcast feature. When this option is set to Enable, your wireless network name is broadcast to anyone within wireless signal range. When this is disabled, you must enter the Wireless Network Name (SSID) on the client manually to connect to the network.

**WMM :** Choose to Enable or Disable WMM. This is the Quality of Service (QoS) feature for prioritizing voice and video applications.

**Encryption :** Choose between disable, WEP, WPA, WPA2 or 802.1x for your wireless security.

**Encryption (Disabled) :** Choosing disable allow wireless clients connects to TEW-753DAP without password

You can relay the authentication to remote RADIUS server by checking **Enable 802.1x Authentication** and entering RADIUS server information.

**Encryption (WEP) :** WEP, Wire Equivalent Protection, provides a basic wireless security

**Authentication Type :** Select Open System, Shared Key, or auto. **Open System** allows any client to authenticate as long as it conforms to any MAC address filter policies that may have been set. All authentication packets are transmitted without encryption. **Shared Key** sends an unencrypted challenge text string to any device attempting to communicate with the AP. The device requesting authentication encrypts the challenge text and sends it back to the access point. If the challenge text is encrypted correctly, the access point allows the requesting device to authenticate. It is recommended to select **Auto** if you are not sure which authentication type is used.

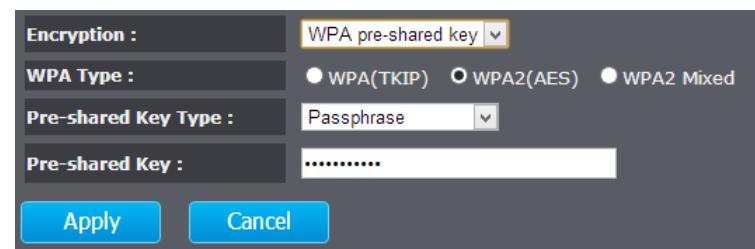

**Key Length :** Select a 64-bit or 128-bit WEP key length from the drop-down list

**Key Type :** Select a key type from the drop-down list. 128-bit encryption requires a longer key than 64-bit encryption. Keys are defined by entering in a string in HEX (hexadecimal - using characters 0-9, A-F) or ASCII (American Standard Code for Information Interchange - alphanumeric characters) format. ASCII format is provided so you can enter a string that is easier to remember

**Default Key :** You may choose one of your 4 different WEP keys from below

**Encryption Key 1-4 :** You may enter four different WEP keys

**Enable 802.1x Authentication :** Check on this box if you would like to use static WEP plus 802.1x authentication. This option works with a RADIUS Server to authenticate wireless clients. Wireless clients can either use Static WEP or 802.1x authentication in order to connect to the network. For 802.1x, clients should have necessary credentials to be authenticated by the Server. Furthermore, it is necessary to specify the RADIUS Server's IP address, service port number, and shared secret.

**Encryption (WPA pre-shared key) :** Wi-Fi Protected Access (WPA) pre-shared key

**WPA Type :** Select TKIP, AES, or WPA2 Mixed. The encryption algorithm used to secure the data communication. TKIP (Temporal Key Integrity Protocol) provides per-packet key generation and is based on WEP. AES (Advanced Encryption Standard) is a very secure block based encryption. Note that, if the bridge uses the AES option, the bridge can associate with the access point only if the access point is also set to use only AES.

**Pre-shared Key Type :** The Key Type can be passphrase or Hex format

**Pre-shared Key :** The key is entered as a pass-phrase of up to 63 alphanumeric characters in ASCII (American Standard Code for Information Interchange) format at both ends of the wireless connection. It cannot be shorter than eight characters, although for proper security it needs to be of ample length and should not be a commonly known phrase. This phrase is used to generate session keys that are unique for each wireless client

Encryption :	WPA RADIUS
WPA Type :	<input checked="" type="radio"/> WPA(TKIP) <input type="radio"/> WPA2(AES) <input checked="" type="radio"/> WPA2 Mixed
RADIUS Server IP Address :	<input type="text"/>
RADIUS Server Port :	1812
RADIUS Server Shared Secret :	<input type="text"/>
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

**Encryption (WPA RADIUS) :** Use RADIUS server manage your wireless authentication keys for easier account management

**WPA Type :** Select TKIP, AES, or WPA2 Mixed. The encryption algorithm used to secure the data communication. TKIP (Temporal Key Integrity Protocol) provides per-packet key generation and is based on WEP. AES (Advanced Encryption Standard) is a very secure block based encryption. Note that, if the bridge uses the AES option, the bridge can associate with the access point only if the access point is also set to use only AES.

**RADIUS Server IP Address :** IP address of RADIUS server

**RADIUS Server Port :** RADIUS service port number. Default: 1812

**RADIUS Server Shared Secret:** RADIUS service shared secret to authenticate this credential agent.

**Apply :** Click this button to apply the change

**Cancel :** Click this button to abandon the change

#### Wireless MAC Filter

Set up wireless security settings in this page. Select SSID you want to set up, change the value and then click on **Apply** to commit the changes. Enabling security prevents any unauthorized wireless clients to connect into your network.

### 2.4GHz / Wireless MAC Filter

**CAUTION:** When WPS is enabled, Wireless MAC Filter cannot be applied to the first SSID.

ACL Mode:

MAC Address:

#	MAC Address

### Wireless Advanced Settings

Fine tuning your wireless settings on this page.

### 2.4GHz / Wireless Advanced Settings

Data Rate	<input type="button" value="Auto"/>
Transmit Power	<input type="button" value="18 dBm"/>
RTS/CTS Threshold (1 - 2346)	<input type="button" value="2346 bytes"/>
Distance (1-30km)	<input type="button" value="1 km"/>
Aggregation:	<input type="radio"/> Enable <input checked="" type="radio"/> Disable 32 Frames 50000 Bytes(Max)

#### WMM Parameters

AC	CWmin	CWmax	AIFS	TXOP Limit
AC_BE	4	10	3	0
AC_BK	4	10	7	0
AC_VI	3	4	2	3.008ms
AC_VO	2	3	2	1.504ms

#### Client limit

Frequency	Enable	Max Client
2.4G	<input checked="" type="checkbox"/>	<input type="button" value="127"/>

**Fragment Threshold :** Packets over the specified size will be fragmented in order to improve performance on noisy networks. Specify a value between 256 and 2346. The default value is 2346.

**RTS Threshold :** Packets over the specified size will use the RTS/CTS mechanism to maintain performance in noisy networks and preventing hidden nodes from degrading the performance. Specify a value between 0 and 2347. The default value is 2347

**Beacon Interval :** Beacons are packets sent by a wireless Access Point to synchronize wireless devices. Specify a Beacon Interval value between 24 and 1024. The default value is set to 100 milliseconds.

**DTIM Period :** A DTIM is a countdown informing clients of the next window for listening to broadcast and multicast messages. When the wireless Access Point has buffered broadcast or multicast messages for associated clients, it sends the next DTIM with a DTIM Period value. Wireless clients detect the beacons and awaken to receive the broadcast and multicast messages. The default value is 1. Valid settings are between 1 and 10.

**Data rate :** You can select a data rate from the drop-down list, however, it is recommended to select auto. In auto mode, TEW753DAP will choose the maximum data rate to fit the instant wireless channel quality automatically.

**N Data Rate :** Select different 802.11N Modulation and Coding Scheme (MCS) against particular wireless noise. Or, select auto letting TEW-753DAP select MCSs dynamically.

**Channel Bandwidth :** Select channel bandwidth for 1) Dynamic select 20 MHz and 40MHz bandwidth or 2) choose 20MHz channels only.

**Preamble Type :** Select a short or long preamble. For optimum performance it is recommended to also configure the client device to the same preamble type.

**CTS Protection :** Clear to Send, CTS, can be always enabled, auto, or disabled. By enabled CTS, the Access Point and clients will wait for a 'channel cleared' signal before transmitting. It is recommended setting to auto.

**Tx Power :** Wireless signal transmission power. Set transmission power to appropriate value can make your multiple AP deployment easier. The default value is 26 dBm. Valid settings are between 11 and 29.

**Apply :** Click this button to apply the change

**Cancel :** Click this button to abandon the change

**Apply :** Click this button to apply the change

**Cancel :** Click this button to abandon the change

WPS is the simplest way to connect a wireless client to TEW-753DAP. You don't have to select the encryption mode and fill in a long encryption passphrase every time when you try to setup a wireless connection. You only need to press a button on both wireless client and TEW-753DAP, and the WPS will do the rest for you.

The TEW-753DAP supports two types of WPS: WPS via Push Button and WPS via PIN code. If you want to use the Push Button, you have to push a specific button on the wireless client or in the utility of the wireless client to start the WPS pairing, and click the **Start to Process** button in this page under **WPS via Push Button** to start WPS pairing.

If you want to use the PIN code, you have to know the PIN code of the wireless client and switch it to WPS mode, then fill-in the PIN code of the wireless client through the web configuration interface of the wireless router.

## WPS

### 2.4GHz / WPS Setting

WPS	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
WPS current status	Configured <a href="#">Release Configuration</a>
Self Pin Code	35525646
SSID	TRENDnet753_2.4GHz_5RL2
Authentication Mode	WPA2-PSK AES
Passphrase Key	*****
WPS Via Push Button	<a href="#">Start to Process</a>
WPS Via Pin	<input type="text"/> <a href="#">Start to Process</a>
<a href="#">Apply</a> <a href="#">Cancel</a>	

**WPS :** Check this box to enable feature

**WPS Current Status :** Displays the current status of the WPS configuration

**Self Pin Code :** Displays PIN code of TEW-753DAP

**SSID :** Displays the SSID for WPS pairing. Only the first SSID (SSID\_1) can proceed WPS pairing.

**Authentication Mode :** Displays the authentication mode of  
SSID\_1

**Passphrase Key :** Current passphrase

**WPS Via Push Button :** Click on the **Start to Process** button if you would like to enable WPS through the Push Button instead of the PIN.

After pressing this button you will be required to press the WPS on the client device within two minutes. Click on the **OK** button in the dialog box

**WPS via PIN :** Specify a PIN, which unique number that can be used to add the router to an existing network or to create a new network. Then click on the **Start to Process** button

## 5G Wireless

### Wireless Network

General setups for your wireless connection. You can setup up to four SSIDs for different group of users.

5GHz / Wireless Network				
Wireless Mode	802.11 A/N Mixed

### Wireless MAC Filter

Set up wireless security settings in this page. Select SSID you want to set up, change the value and then click on **Apply** to commit the changes. Enabling security prevents any unauthorized wireless clients to connect into your network.

### 5GHz / Wireless MAC Filter

**CAUTION:** When WPS is enabled, Wireless MAC Filter cannot be applied to the first SSID.

ACL Mode

:  :  :  :  :  **Add**

#	MAC Address
---	-------------

**Apply**

**ESSID Selection :** Select the SSID you want to set up wireless security

**Separate :** **SSID:** If you check this box, clients associated with this SSID cannot communicate with wireless clients associated with other SSID directly.

**STA:** If you check this box, wireless clients (a.k.a. STA) associated with this SSID cannot communicate to each other directly. Even they are in the same wireless group.

**Broadcast ESSID :** Select Enable or Disable from the drop-down list. This is the SSID broadcast feature. When this option is set to Enable, your wireless network name (SSID) is broadcast to anyone within wireless signal range. When this is disabled, you must enter the Wireless Network Name (SSID) on the client manually to connect to the network.

**WMM :** Choose to Enable or Disable WMM. This is the Quality of Service (QoS) feature for prioritizing voice and video applications.

**Encryption :** Choose between disable, WEP, WPA, WPA2 or 802.1x for your wireless security.

**Encryption (Disabled) :** Choosing disable allow wireless clients connects to TEW-753DAP without password

You can relay the authentication to remote RADIUS server by checking **Enable 802.1x Authentication** and entering RADIUS server information.

**Encryption (WEP) :** WEP, Wire Equivalent Protection, provides a basic wireless security

**Authentication Type :** Select Open System, Shared Key, or auto.

**Open System** allows any client to authenticate as long as it conforms to any MAC address filter policies that may have been set. All authentication packets are transmitted without encryption.

**Shared Key** sends an unencrypted challenge text string to any device attempting to communicate with the AP. The device requesting authentication encrypts the challenge text and sends it back to the access point. If the challenge text is encrypted correctly, the access point allows the requesting device to authenticate. It is recommended to select **Auto** if you are not sure which authentication type is used.

**Key Length :** Select a 64-bit or 128-bit WEP key length from the drop-down list

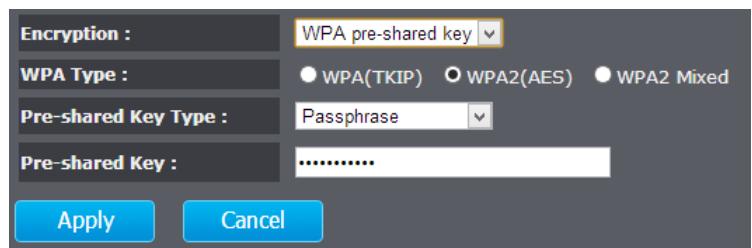

**Key Type :** Select a key type from the drop-down list. 128-bit encryption requires a longer key than 64-bit encryption. Keys are defined by entering in a string in HEX (hexadecimal - using characters 0-9, A-F) or ASCII (American Standard Code for Information Interchange - alphanumeric characters) format. ASCII format is provided so you can enter a string that is easier to remember

**Default Key :** You may choose one of your 4 different WEP keys from below

**Encryption Key 1-4 :** You may enter four different WEP keys

**Enable 802.1x Authentication :** Check on this box if you would like to use static WEP plus 802.1x authentication.

This option works with a RADIUS Server to authenticate wireless clients. Wireless clients can either use Static WEP or 802.1x authentication in order to connect to the network. For 802.1x, clients should have necessary credentials to be authenticated by the Server. Furthermore, it is necessary to specify the RADIUS Server's IP address, service port number, and shared secret.

**Encryption (WPA pre-shared key) :** Wi-Fi Protected Access (WPA) pre-shared key

**WPA Type :** Select TKIP, AES, or WPA2 Mixed. The encryption algorithm used to secure the data communication. TKIP (Temporal Key Integrity Protocol) provides per-packet key generation and is based on WEP. AES (Advanced Encryption Standard) is a very secure block based encryption. Note that, if the bridge uses the AES option, the bridge can associate with the access point only if the access point is also set to use only AES.

**Pre-shared Key Type :** The Key Type can be passphrase or Hex format

**Pre-shared Key :** The key is entered as a pass-phrase of up to 63 alphanumeric characters in ASCII (American Standard Code for Information Interchange) format at both ends of the wireless connection. It cannot be shorter than eight characters, although for proper security it needs to be of ample length and should not be a commonly known phrase. This phrase is used to generate session keys that are unique for each wireless client

**Fragment Threshold :** Packets over the specified size will be fragmented in order to improve performance on noisy networks. Specify a value between 256 and 2346. The default value is 2346.

**RTS Threshold :** Packets over the specified size will use the RTS/CTS mechanism to maintain performance in noisy networks and preventing hidden nodes from degrading the performance. Specify a value between 0 and 2347. The default value is 2347

**Beacon Interval :** Beacons are packets sent by a wireless Access Point to synchronize wireless devices. Specify a Beacon Interval value between 24 and 1024. The default value is set to 100 milliseconds.

**DTIM Period :** A DTIM is a countdown informing clients of the next window for listening to broadcast and multicast messages. When the wireless Access Point has buffered broadcast or multicast messages for associated clients, it sends the next DTIM with a DTIM Period value. Wireless clients detect the beacons and awaken to receive the broadcast and multicast messages. The default value is 1. Valid settings are between 1 and 10.

**Data rate :** You can select a data rate from the drop-down list, however, it is recommended to select auto. In auto mode, TEW753DAP will choose the maximum data rate to fit the instant wireless channel quality automatically.

**N Data Rate :** Select different 802.11N Modulation and Coding Scheme (MCS) against particular wireless noise. Or, select auto letting TEW-753DAP select MCSs dynamically.

**Channel Bandwidth :** Select channel bandwidth for 1) Dynamic select 20 MHz and 40MHz bandwidth or 2) choose 20MHz channels only.

**Preamble Type :** Select a short or long preamble. For optimum performance it is recommended to also configure the client device to the same preamble type.

**CTS Protection :** Clear to Send, CTS, can be always enabled, auto, or disabled. By enabled CTS, the Access Point and clients will wait for a 'channel cleared' signal before transmitting. It is recommended setting to auto.

**Tx Power :** Wireless signal transmission power. Set transmission power to appropriate value can make your multiple AP deployment easier. The default value is 26 dBm. Valid settings are between 11 and 29.

**Apply :** Click this button to apply the change

**Cancel :** Click this button to abandon the change

## WPS

WPS is the simplest way to connect a wireless client to TEW-753DAP. You don't have to select the encryption mode and fill in a long encryption passphrase every time when you try to setup a wireless connection. You only need to press a button on both wireless client and TEW-753DAP, and the WPS will do the rest for you.

The TEW-753DAP supports two types of WPS: WPS via Push Button and WPS via PIN code. If you want to use the Push Button, you have to push a specific button on the wireless client or in the utility of the wireless client to start the WPS pairing, and click the **Start to Process** button in this page under **WPS via Push Button** to start WPS pairing.

If you want to use the PIN code, you have to know the PIN code of the wireless client and switch it to WPS mode, then fill-in the PIN code of the wireless client through the web configuration interface of the wireless router.

## 5GHz / WPS Setting

WPS	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
WPS current status	<b>Configured</b> <a href="#">Release Configuration</a>
Self Pin Code	35525646
SSID	TRENDnet753_5GHz_AP52
Authentication Mode	WPA2-PSK AES
Passphrase Key	<input type="text"/> *****
WPS Via Push Button	<a href="#">Start to Process</a>
WPS Via Pin	<input type="text"/> <a href="#">Start to Process</a>
<a href="#">Apply</a> <a href="#">Cancel</a>	

**WPS :** Check this box to enable feature

**WPS Current Status :** Displays the current status of the WPS configuration

**Self Pin Code :** Displays PIN code of TEW-753DAP

**SSID :** Displays the SSID for WPS pairing. Only the first SSID (SSID\_1) can proceed WPS pairing.

**Authentication Mode :** Displays the authentication mode of SSID\_1

**Passphrase Key :** Current passphrase

**WPS Via Push Button :** Click on the **Start to Process** button if you would like to enable WPS through the Push Button instead of the PIN.

After pressing this button you will be required to press the WPS on the client device within two minutes. Click on the **OK** button in the dialog box

**WPS via PIN :** Specify a PIN, which unique number that can be used to add the router to an existing network or to create a new network. Then click on the **Start to Process** button

## Management

### **Administration**

Change the password required to log into the access point's web-based management. Passwords can contain 0 to 12 alphanumeric characters, and are case sensitive. Enter your password and system information and then click **Apply** to save the change.

Save/Reload:0	Login Setting	
Status		
System	New Name	admin
2.4G Wireless	Old Password	*****
5G Wireless	New Password	*****
Management	Confirm Password	*****
	<input type="button" value="Next"/>	

**Old Password:** Type in the current password to allow changing to a new password.

**New Password:** Enter your new password here.

**Confirm Password:** Type your new password again for verification

purposes

**System Name:** The system name can be identified on your local network. Changing this system name can change the way you access this AP. For example, if you change the system name to "lobbyfront", you can access this AP by typing <http://lobbyfront/> in Windows and log on to the management page. Default system name is "tew-753DAP".

**Idle Timeout** Automatically Default 10 minutes.

### Management VLAN

This feature is only available under Access Point or WDS AP mode and allows users to configure the 802.1q VLAN settings to for all wireless clients. Enter VLAN ID you want to tag to clients associated with specific SSID. Different SSID should set to different VLAN ID. Enable Virtual LAN service and click **Apply** to save the changes.

LAN VLAN MGMT is a special VLAN to manage TEW-753DAP. Enabling management VLAN tagging will keep all services, for example DHCP server and client, in this VLAN.

This page allows you to assign a VLAN tag to the packets. A VLAN is a group of computers on a network whose software has been configured so that they behave as if they were on a separate Local Area Network (LAN). Computers on VLAN do not have to be physically located next to one another on the LAN.

Note: Only applicable in Access Point and WDS AP mode

### Management VLAN Settings

#### 2.4G Current Profiles

SSID	Security	Isolation	VID	Enable
TRENDnet753_2.4GHz_5RL2	WPA2-PSK AES	<input type="checkbox"/>	1	<input checked="" type="checkbox"/>
	None	<input type="checkbox"/>	2	<input type="checkbox"/>
	None	<input type="checkbox"/>	3	<input type="checkbox"/>
	None	<input type="checkbox"/>	4	<input type="checkbox"/>
	None	<input type="checkbox"/>	5	<input type="checkbox"/>
	None	<input type="checkbox"/>	6	<input type="checkbox"/>
	None	<input type="checkbox"/>	7	<input type="checkbox"/>
	None	<input type="checkbox"/>	8	<input type="checkbox"/>

#### 5G Current Profiles

SSID	Security	Isolation	VID	Enable
TRENDnet753_5GHz_5RL2	WPA2-PSK AES	<input type="checkbox"/>	51	<input checked="" type="checkbox"/>
	None	<input type="checkbox"/>	52	<input type="checkbox"/>
	None	<input type="checkbox"/>	53	<input type="checkbox"/>
	None	<input type="checkbox"/>	54	<input type="checkbox"/>

### SNMP Settings

SNMP Setting allows you to assign the contact details, location, community name and trap settings for SNMP. This is a networking management protocol used to monitor network-attached devices. SNMP allows messages (called protocol data units) to be sent to various parts of a network. Upon receiving these messages, SNMP-compatible devices (called agents) return data stored in their Management Information Bases.

**SNMP Settings**

### **Backup / Restore Settings**

This page allows you to save the current configurations. Click **Save** to save your current configuration.

To load configurations saved previously, click **Browse ...** to find configuration file and then click **Upload**.

In case you want to reset TEW-753DAP configuration back to factory default, click **Reset** in this page. All configurations will be set back to its original default settings.

### **Backup/Restore Settings**

### **Auto Reboot Settings**

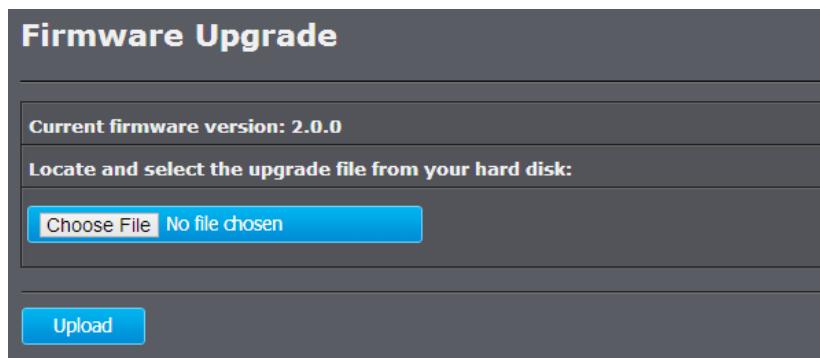

Click on **Apply**, the TEW-753DAP will go through all the reboot process automatically.

### Firmware Upgrade

TRENDnet may periodically release firmware upgrades that might add features or fix problems associated with your TRENDnet model and version. To find out if there is a firmware upgrade available for your device, please check your TRENDnet model and version using the link.

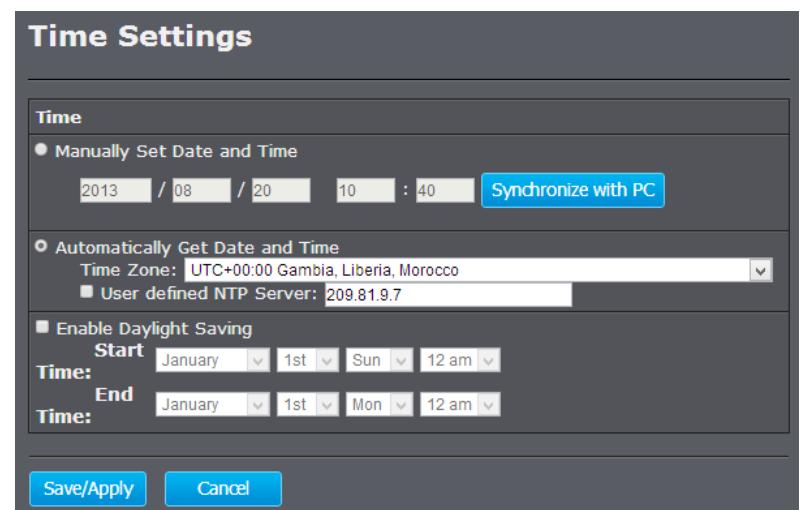

<http://www.trendnet.com/downloads/>

1. If a firmware upgrade is available, download the firmware to your computer.
2. Unzip the file to a folder on your computer.
3. Log into the TEW-753DAP
4. Click on **Management** and then **Firmware Upgrade**
5. Click **Browse...** and navigate to the folder on your computer in which the unzipped firmware file (.bin) is.
6. Located and select it the firmware file.
7. Click **Apply**.

### Time Setting

The Time Setting allows your access point to reference or base its time on the settings configured here, which will affect functions such as log entries and schedules.

**Time Setup :** Choose a source of time to synchronize with. You can choose to synchronize the TEW-753DAP with a NTP server or your PC.

**Time Zone :** Select the time zone of the country you are currently in. The TEW-753DAP will set its time based on your selection.

**NTP Time Server :** Specify a time server (NTP server) to synchronize with. (e.g. pool.ntp.org)

**Daylight Savings :** Check this box if your time zone has daylight savings.

**DST Start / DST End :** Specify the starting date and end date of daylight savings.

**Apply :** Click this button to apply the change

**Cancel :** Click this button to abandon the change

### Schedule

Service schedule can be set up daily or weekly for power saving and security reason. Click **Add** to add a schedule rule entry. Select an entry and click **Edit** or **Delete Selected** to change the entry. Click **Delete All** to remove all entries. After schedule editing, click **Apply** to save your schedule. Check **Enabled Schedule Table** to make AP services work with schedule.

<b>Wireless LED</b> Orange: 2.4GHz Green: 5GHz	OFF	No wireless network connection or LED display has been disabled
	Flashing	Wireless network activities are detected

## Logout

Logout from the management page. The TEW-753DAP allows only one management login at the same time. If you want to access the TEW-753DAP from different computer, remember to logout the web management page first.

## Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

**FCC Caution:** Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

### IMPORTANT NOTE:

#### FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

The availability of some specific channels and/or operational frequency bands are country dependent and are firmware programmed at the factory to match the intended destination. The firmware setting is not accessible by the end user.

## **Europe – EU Declaration of Conformity**

This device complies with the essential requirements of the R&TTE Directive 1999/5/EC, 2006/95/EC and 2009/125/EC.. The following test methods have been applied in order to prove presumption of conformity with the essential requirements of the R&TTE Directive 1999/5/EC, 2006/95/EC and 2009/125/EC:

EN 60950-1:2006+A11:2009+A1:2010+A12:2011

IEC 60950-1:2005 (2nd Edition) Am 1:2009

Safety of Information Technology Equipment

EN50385 : 2002

Generic standard to demonstrate the compliance of electronic and electrical apparatus with the basic restrictions related to human exposure to electromagnetic fields (0 Hz - 300 GHz)

EN 300 328 V1.7.1

Electromagnetic compatibility and Radio spectrum Matters (ERM); Wideband transmission systems; Data transmission equipment operating in the 2,4 GHz ISM band and using wide band modulation techniques; Harmonized EN covering essential requirements under article 3.2 of the R&TTE Directive

EN 301 489-1 V1.9.2

Electromagnetic compatibility and Radio Spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 1: Common technical requirements

EN 301 489-17 V2.2.1

Electromagnetic compatibility and Radio spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 17: Specific conditions for 2,4 GHz wideband transmission systems and 5 GHz high performance RLAN equipment

This device is a 2.4 GHz wideband transmission system (transceiver), intended for use in all EU member states and EFTA countries, except in France and Italy where restrictive use applies.

In Italy the end-user should apply for a license at the national spectrum authorities in order to obtain authorization to use the device for setting up outdoor radio links and/or for supplying public access to telecommunications and/or network services.

This device may not be used for setting up outdoor radio links in France and in some areas the RF output power may be limited to 10 mW EIRP in the frequency range of 2454 – 2483.5 MHz. For detailed information the end-user should contact the national spectrum authority in France.

### **RoHS**

This product is RoHS compliant.

<input type="checkbox"/> <b>Cesky</b> [Czech]	TRENDnet tímto prohlašuje, že tento TEW-753DAP je ve shodě se základními požadavky a dalšími příslušnými ustanoveními směrnice 1999/5/ES, 2006/95/ES, a 2009/125/ES.

<input type="checkbox"/> <b>Magyar</b> [Hungarian]	Alulírott, TRENDnet nyilatkozom, hogy a TEW-753DAP megfelel a vonatkozó alapvető követelményeknek és az 1999/5/EK irányelv, a 2006/95/EK és a 2009/125/EK irányelv egyéb előírásainak.
<input type="checkbox"/> <b>Polski</b> [Polish]	Niniejszym TRENDnet oświadcza, że TEW-753DAP jest zgodny z zasadniczymi wymogami oraz pozostałymi stosownymi postanowieniami Dyrektywy 1999/5/WE, 2006/95/WE i 2009/125/WE.
<input type="checkbox"/> <b>Português</b> [Portuguese]	TRENDnet declara que este TEW-753DAP está conforme com os requisitos essenciais e outras disposições da Directiva 1999/5/CE, 2006/95/CE e 2009/125/CE.
<input type="checkbox"/> <b>Slovensko</b> [Slovenian]	TRENDnet izjavlja, da je ta TEW-753DAP v skladu z bistvenimi zahtevami in ostalimi relevantnimi določili direktive 1999/5/ES, 2006/95/ES, a 2009/125/ES.
<input type="checkbox"/> <b>Slovensky</b> [Slovak]	TRENDnet týmto vyhlasuje, že TEW-753DAP spĺňa základné požiadavky a všetky príslušné ustanovenia Smernice 1999/5/EF.
<input type="checkbox"/> <b>Suomi</b> [Finnish]	TRENDnet vakuuttaa täten että TEW-753DAP tyyppinen laite on direktiivin 1999/5/EY, 2006/95/EY ja 2009/125/EY oleellisten vaatimusten ja sitä koskevien direktiivin muiden ehtojen mukainen.
<input type="checkbox"/> <b>Svenska</b> [Swedish]	Härmed intygar TRENDnet att denna TEW-753DAP står i överensstämmelse med de väsentliga egenskapskrav och övriga relevanta bestämmelser som framgår av direktiv 1999/5/EG, 2006/95/EG och 2009/125/EG.

## Limited Warranty

TRENDnet warrants its products against defects in material and workmanship, under normal use and service, for the following lengths of time from the date of purchase.

- TEW-753DAP – 3 Years Warranty
- AC/DC Power Adapter, Cooling Fan, and Power Supply carry 1 year warranty.

If a product does not operate as warranted during the applicable warranty period, TRENDnet shall reserve the right, at its expense, to repair or replace the defective product or part and deliver an equivalent product or part to the customer. The repair/replacement unit's warranty continues from the original date of purchase. All products that are replaced become the property of TRENDnet. Replacement products may be new or reconditioned. TRENDnet does not issue refunds or credit. Please contact the point-of-purchase for their return policies.

TRENDnet shall not be responsible for any software, firmware, information, or memory data of customer contained in, stored on, or integrated with any products returned to TRENDnet pursuant to any warranty.

There are no user serviceable parts inside the product. Do not remove or attempt to service the product by any unauthorized service center. This warranty is voided if (i) the product has been modified or repaired by any unauthorized service center, (ii) the product was subject to accident, abuse, or improper use (iii) the product was subject to conditions more severe than those specified in the manual.

Warranty service may be obtained by contacting TRENDnet within the applicable warranty period and providing a copy of the dated proof of the purchase. Upon proper submission of required documentation a Return Material Authorization (RMA) number will be issued. An RMA number is required in order to initiate warranty service support for all TRENDnet products. Products that are sent to TRENDnet for RMA service must have the RMA number marked on the outside of return packages and sent to TRENDnet prepaid, insured and packaged appropriately for safe shipment. Customers shipping from outside of the USA and Canada are responsible for return shipping fees. Customers shipping from outside of the USA are responsible for custom charges, including but not limited to, duty, tax, and other fees.

**WARRANTIES EXCLUSIVE:** IF THE TRENDNET PRODUCT DOES NOT OPERATE AS WARRANTED ABOVE, THE CUSTOMER'S SOLE REMEDY SHALL BE, AT TRENDNET'S OPTION, REPAIR OR REPLACE. THE FOREGOING WARRANTIES AND REMEDIES ARE EXCLUSIVE AND ARE IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, EITHER IN FACT OR BY OPERATION OF LAW, STATUTORY OR OTHERWISE, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. TRENDNET NEITHER ASSUMES NOR AUTHORIZES ANY OTHER PERSON TO ASSUME

FOR IT ANY OTHER LIABILITY IN CONNECTION WITH THE SALE, INSTALLATION MAINTENANCE OR USE OF TRENDNET'S PRODUCTS.

TRENDNET SHALL NOT BE LIABLE UNDER THIS WARRANTY IF ITS TESTING AND EXAMINATION DISCLOSE THAT THE ALLEGED DEFECT IN THE PRODUCT DOES NOT EXIST OR WAS CAUSED BY CUSTOMER'S OR ANY THIRD PERSON'S MISUSE, NEGLECT, IMPROPER INSTALLATION OR TESTING, UNAUTHORIZED ATTEMPTS TO REPAIR OR MODIFY, OR ANY OTHER CAUSE BEYOND THE RANGE OF THE INTENDED USE, OR BY ACCIDENT, FIRE, LIGHTNING, OR OTHER HAZARD.

**LIMITATION OF LIABILITY:** TO THE FULL EXTENT ALLOWED BY LAW TRENDNET ALSO EXCLUDES FOR ITSELF AND ITS SUPPLIERS ANY LIABILITY, WHETHER BASED IN CONTRACT OR TORT (INCLUDING NEGLIGENCE), FOR INCIDENTAL, CONSEQUENTIAL, INDIRECT, SPECIAL, OR PUNITIVE DAMAGES OF ANY KIND, OR FOR LOSS OF REVENUE OR PROFITS, LOSS OF BUSINESS, LOSS OF INFORMATION OR DATA, OR OTHER FINANCIAL LOSS ARISING OUT OF OR IN CONNECTION WITH THE SALE, INSTALLATION, MAINTENANCE, USE, PERFORMANCE, FAILURE, OR INTERRUPTION OF THE POSSIBILITY OF SUCH DAMAGES, AND LIMITS ITS LIABILITY TO REPAIR, REPLACEMENT, OR REFUND OF THE PURCHASE PRICE PAID, AT TRENDNET'S OPTION. THIS DISCLAIMER OF LIABILITY FOR DAMAGES WILL NOT BE AFFECTED IF ANY REMEDY PROVIDED HEREIN SHALL FAIL OF ITS ESSENTIAL PURPOSE.

**Governing Law:** This Limited Warranty shall be governed by the laws of the state of California.
